This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing Of Claims

1. (Previously Presented) A method of using a number of a plurality of cryptographic keys in a display device

having a printed circuit board (PCB) and a master block, comprising:

providing the number of the plurality of keys to the PCB by the master block;

selecting one of a number of available encryption protocols for each of the provided keys;

encrypting each of the provided keys based upon a particular one of the selected encryption protocols;

storing the encrypted keys in a non-volatile memory by the PCB;

decrypting the stored encrypted key, as needed, by the PCB based upon the selected encryption protocol.

- 2. (Cancelled)
- (Cancelled)
- 4. (Previously Presented) The method as recited in claim 1, further comprising:

storing the encrypted keys in the non-volatile memory.

- 5. (Original) The method as recited in claim 4, further comprising: decrypting selected ones of the stored encrypted keys, as needed.
- 6. (Previously Presented) The method as recited in claim 1, wherein the

MAR. 9. 2006 3:37PM 16509618301 NO. 793 P. 5

plurality of keys includes a decryption key and an authentication key.

- 7. (Original) The method as recited in claim 6, further comprising: receiving a cryptography related command.
- 8. (Original) The method as recited in claim 7 wherein the cryptography command includes an authentication request and a number of associated authentication request parameters.
- (Original) The method as recited in claim 8, wherein the authentication request is an HDCP authentication request.
- 10. (Original) The method as recited in claim 8, further comprising: retrieving an encrypted authentication key from the non volatile memory corresponding to the authentication request; and

decrypting the authentication request based upon a corresponding decryption protocol.

- 11. (Original) The method as recited in claim 10, further comprising: responding to the authentication request based on the decrypted authentication request.
- 12. (Previously Presented) Computer program product for using a cryptographic key in a display device having a printed circuit board (PCB) and a master block, comprising: computer code for providing a key to the PCB by the master block; computer code for selecting one of a number of encryption protocols available to the
- PCB;

 computer code for encrypting the key based upon the selected encryption protocols;

 computer code for storing the encrypted key in a non-volatile memory by the PCB;

computer code for decrypting the stored encrypted key, as needed, by the PCB based upon the selected encryption protocol; and

computer readable medium for storing the computer code.

- 13. (Original) Computer program product as recited in claim 12, wherein the key is one of a plurality of keys and further comprising:

 computer code for providing a number of the plurality of keys.
- 14. (Original) Computer program product as recited in claim 13, further comprising; computer code for selecting one of the number of available encryption protocols for each of the provided keys; and

computer code for encrypting each of the provided keys based upon a particular one of the selected encryption protocols.

- 15. (Original) Computer program product as recited in claim 14, further comprising: computer code for storing the encrypted keys in the non-volatile memory.
- 16. (Original) Computer program product as recited in claim 15, further comprising: computer code for decrypting selected ones of the stored encrypted keys, as needed.
- 17. (Original) Computer program product as recited in claim 13, wherein the plurality of keys includes a decryption key and an authentication key.
 - 18. (Original) Computer program product as recited in claim 17, further comprising: computer code for receiving a cryptography related command.

NO. 793 P. 7

- (Currently Amended) Computer program product as recited in claim 18 wherein 19. the cryptography command includes an authentication request and a number of associated authentication request parameters.
- (Original) Computer program product as recited in claim 19, wherein the 20. authentication request is an HDCP authentication request.
- (Original) Computer program product as recited in claim 19, further comprising: 21. computer code for retrieving an encrypted authentication key from the non volatile memory corresponding to the authentication request; and

computer code for decrypting the authentication request based upon a corresponding decryption protocol.

(Original) Computer program product as recited in claim 21, further comprising: 22. computer code for responding to the authentication request based on the decrypted authentication request.
